COEACTOR: Blinds 3 calcium ions.

ENZYME REGULATION: Activated by 200-1000 micromolar concentration of calcium and inhibited by calpastatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SUBUNIT: Heterodimer of a large (catalytic) and
